measures the long term risk associated with a company's ability to remain in business. A company's "OPS" logically falls into a mathematical sequence that ranks it into one of eight distinctive "risk" categories. Each of the categories is based on a company's operating cash flow for each of its last 4 quarters and its cumulative operating cash flow for its most recent 12 months. OPS Rankings are upgraded, downgraded or reiterated each time a company files a quarterly report and at any time that its financial statements are amended.
